

### **Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application.

### **Listing of Claims:**

1. (Cancelled)
2. (Currently Amended) A variable delay line ~~according to claim 1~~ comprising:  
a hybrid coupler having an input terminal for receiving an input signal, first and second output terminals for outputting first and second output signals, respectively, which are 90° out of phase with each other, and an isolation terminal for outputting a reflected signal based on said first and second output signals as a third output signal;  
and  
first and second reactance parts connected respectively to said first and second output terminals, said first and second reactance parts having substantially the same reactance,  
said first and second reactance parts comprising first and second variable-reactance devices and first and second resonant circuits, respectively, wherein said first and second variable-reactance devices comprise~~comprising~~respective first and second series-connected circuits of first and second capacitors having substantially the same capacitance, and first and second variable-capacitance devices, each of said resonant circuits being connected between said respective variable-reactance device and a common ground, and said variable-reactance devices having substantially the same reactance.
3. (Previously Presented) A variable delay line according to claim 2 further comprising third and fourth series-connected circuits having third and fourth capacitors and third and fourth variable-capacitance devices as variable-reactance devices, respectively, said third and fourth series connected circuits being connected in

parallel to said first resonant circuit and said second resonant circuit, respectively, such that an input of each of said third and fourth series connected circuit is connected to an input of said respective resonant circuit and outputs of each of said third and fourth series connected circuits and said respective resonant circuits are connected to the common ground.

4. (Previously Presented) A variable delay line according to claim 2 further comprising an integral structural body, said integral structural body having a ceramic layer with said hybrid coupler disposed thereon, a ceramic layer with said first resonant circuit and said second resonant circuit disposed thereon, and a ceramic layer with at least said first and second capacitors disposed thereon.

5. (Previously Presented) A variable delay line according to claim 3 further comprising an integral structural body, said integral structural body having a ceramic layer with said hybrid coupler disposed thereon, a ceramic layer with said first resonant circuit and said second resonant circuit disposed thereon, and a ceramic layer with at least said first and second capacitors disposed thereon.
